AGAINST THE REPRESSION AGAINST ANARCHISTS IN INDONESIA

xcn@riseup.net

In the past few years we have seen a massive crackdown on anarchist individuals and cells by the State. Though in some cases it was arbitrary arrests of individuals, the recent state-sponsored studies on anarchist activity in Indonesia has been brought to our attention. It is because of these reasons and also to secure our comrades that are already targeted by the State that we need better infrastructure of resistance in this era of social control and surveillance. The necessity of this proposed solidarity infrastructure is part of our continual revolt against the state and its apparatus. We are not paranoid or overwhelmed by fear, in fact the opposite, we want to strike harder than before and we want to get better at storming the heavens. You can support our infrastructure of resistance project:

Call for revolutionary solidarity with anarchist comrades in Indonesia

Again the repressive international security state moves against the anarchist tendencies who fight to establish and maintain their existence as a threat to the system. The anarchists in Indonesia who are principled enough to put their words into actions are our comrades in struggle. In an increased atmosphere of anti-anarchist repression against the movement in Indonesia, alongside the criminalization of the Anarchist Black Cross group there, we call for international solidarity and closer contact for mutual aid and common projects, to aid anarchists under repression and help support anarchist infrastructures.

In April 2022, Muh Taufiqirrohman, a security consultant writing for Stratsea, published a short analytic article as part of calls for repression of the anarchist movement in Indonesia. The language of this security 'expert' is clearly drawn from the European 'anti-extremist' playbook. Since this analysis was no idle threat from Stratsea and the Indonesian regime, we can learn from, and analyze the strategy of European and American security companies to export repressive techniques to new countries for adoption of common approaches at a local level. Similar repressive analysis and implementation can be found as practiced in other countries and we can examine their proposals, understand them and act against them.

For a black international.
